Exclusive Light Design for Exterior and Interior

YACHTLITE is the global market leader and worldwide trendsetter for LED based illumination for name letterings, logos and customized fixtures for yachts.

Made entirely in Germany YACHTLITE products, with their perfectly homogeneous illumination, boast the highest quality. LEDs and technology are guaranteed completely shock and waterproof and are perfectly sealed for wind and UV resistance.

YACHTLITE's flexible technology applies everywhere on board. The unsurpassed diversity of YACHTLITE's product lines with their variety of surface finishes enjoy remarkable popularity as décor variants for interior room – especially in the mega and super yacht industry. StairLites combine practicality with individuality as the surfaces can be personalised with logo, yacht name or initials. Homogeneous FormLite light contours offer limitless possibilities for stair or recess silhouettes or floating light frames around furniture and gangways. With RoomLite entire surfaces can be saturated with light. Through-lit marble on steps or on complete walls creates spatial light solutions with high wellness factor. Latest "WOW" product is FloorLite, homogeneous light inlays for teak decks and steps. Embedded into the flooring, these treadable elements can even be sanded together with the teak.

Today, using illumination to accentuate or even activate moods is becoming increasingly important. How and where to illuminate can be precisely determined. The experienced and innovative YACHTLITE team guarantees competent and individual support from initial design to assembly on location. CNC-controlled equipment ensures perfect customisation and increasingly complex lighting control techniques allow illumination to be activated when necessary either for certain activities or in correspondence to existing natural light conditions. The only limit is your own imagination.
