YACHTLITE'S XR1 LIGHT ELEMENTS

Looking for the WOW effect? Install Yachtlite's XR1 light elements on the hydraulic lift system of a yacht's indoor pool floor. When the luxury pool's floor rises to become a dance floor, specially developed cable guides ensure that the elements follow all the movements. Intelligent light and temperature management are the constructive base for each light mood. Because each element is individually controllable and programmable, innumerable lighting effects are possible.

XR1 light elements are ideal for illuminated pool floors and dance floors, furniture lighting, ceilings and wall designs. They are homogeneously illuminated from edge to edge, freely selectable in shape and size and available in all standard LED-colours and RGB. The weight capacity is up to 95 tonnes.
