New Developments at Yachtlite

2015 saw the creative light enthusiasts at Yachtlite develop and implement 3D furniture lighting, i.e. light adapted to individual furniture forms. The illuminating lines follow the contours of furniture in all directions. With this new technology, many benefits join forces: design, 3D laser measurement,

3D design, production of elements in 2D, mould construction, thermoforming, surface coating and, of course, perfectly homogeneous illumination.

Additionally, specialty lighting solutions for helidecks are in development. Multiple helidecks are already in development in Europe with more being planned based on Yachtlite's proven LED technology.

At the METS 2015, samples from already implemented 3D solutions will be on display. Moreover, there will be preview samples of new projects. One highlight: a joint exhibit from all members of the newly founded Group20 focussing on 'Pool Projects on Yachts'.
