METS 2014

Taking Excitement One Step Further

Yachtlite's V-Floor

In the Superyacht Pavilion at this year's METS, Yachtlite will be showing an extraordinary connection between light and sound: the V-Floor. Following its world premiere at the Monaco Yacht Show, some V-Floor-elements will now exhibit at METS. Yachtlite's long-term business associate Perfect Audio from Hannover has created a spectacular niche product with the development of a vibrating bass dance floor. Bass sound waves flow through dancers on the floor, whereas bystanders can neither feel nor hear them. The surface is a further development of the already proven Yachtlite FloorLites named XR1: freely controllable and perfectly illuminating LED light elements, here inlaid in teak flooring. The lighting technology is tested according to GL-criteria, is extremely robust and is, of course, perfect for dance floors or pool bases. "XR1" has already been very successfully established in large-scale projects. **i. www.yachtlite.com**
