

Yachtlite

At the boot 2008 Yachtlite will present itself in together with the association Deutsche Yachten and of course with the established Yachtlite booth. In time for the five year brand anniversary Yachtlite will be presenting the brand new ModuLite line of light spot-free LED illuminating elements ideal for furniture, ceiling borders and outdoor equipment. With this novelty Yachtlite realises a pressing request from shipyards, designers, outfitters and ship owners, who have long been searching for a homogeneous interior and exterior illumination. The purpose is to avoid undesired light spot reflexes in glossy surfaces, as well as replacing the lesser quality light tubes and ropes customarily distributed. The ModuLite elements can be made to measure in any form according to received CAD files and are optionally equipped with LEDs in neutral-white, warm-white or other popular colours. RGB colour-change control is also possible.
